MINNEAPOLIS, April 11, 2018 /PRNewswire/ -- Zipnosis, a leading virtual care company, today announced the launch of Surgical Care, the latest platform expansion that allows patients to receive post-operative care from the comfort of their homes. This module represents a new direction for the overall platform, which still maintains a focus on episodic, urgent care conditions, and is the next step toward growing the solution to meet a wider variety of clinical needs while continuing to improve access to care.

Surgical Care offers hospitals and surgical centers the ability to shift routine in-person post-operative visits to an online access point, saving time for both the surgical team and patients. Surgical teams also have the option to add online visits between in-person visits as a means of ensuring post-operative care compliance to help improve patient recovery. Since most surgeries are reimbursed as a bundled payment, virtual visits are a cost-
